

### ### \*\*Jami API Functional Specifications for Phase 1\*\*

To align with your low-literacy user base and immediate goals, here's how Jami's API will function within the platform's communication framework:

---

### ### \*\*1. Core Communication Features\*\*

#### #### \*\*A. Telemedicine Module\*\*

- \*\*Secure Voice Calls\*\*:
  - \*\*Use Case\*\*: Rural patients click a 📞 icon to start a voice call with doctors.
  - \*\*Jami Implementation\*\*:
    - `jami.startVoiceCall()` initiates encrypted peer-to-peer calls.
    - Auto-connects to the nearest available healthcare provider.
  - \*\*Fallback\*\*: SMS-based reminders if connectivity fails.

#### #### \*\*B. Agricultural Support\*\*

- \*\*Voice Messaging\*\*:
  - \*\*Use Case\*\*: Farmers hold a 🗣️ button to describe crop issues (e.g., “আমার ধানের গাছে পোকা ধরেছে” / “My rice plants have pests”).
  - \*\*Jami Implementation\*\*:
    - `jami.sendVoiceMessage()` records and encrypts messages.
    - AI transcribes and routes queries to agricultural experts.

#### #### \*\*C. Labor Rights Reporting\*\*

- \*\*Anonymous Text Chat\*\*:
  - \*\*Use Case\*\*: Workers tap a 🗨️ icon to report factory violations anonymously.
  - \*\*Jami Implementation\*\*:
    - `jami.createEphemeralChat()` generates self-destructing chat sessions.
    - Messages auto-delete after 24 hours for privacy.

---

### ### \*\*2. Security & Accessibility\*\*

- \*\*End-to-End Encryption\*\*: All communications use Jami's built-in E2EE.
- \*\*Low-Bandwidth Mode\*\*: Prioritizes audio compression (Opus codec) for 2G/3G networks.
- \*\*Offline Queuing\*\*: Stores unsent messages locally and auto-syncs when online.

---

### ### \*\*3. UI/Flow Examples\*\*

#### #### \*\*Telemedicine Interaction\*\*

1. User taps ❤️ icon → “ডাক্তারের সাথে কথা বলুন” (Talk to a doctor).
2. Voice call starts via Jami → Doctor joins from predefined roster.

3. Post-call, user receives SMS summary (e.g., prescribed medications).

#### #### \*\*Agricultural Query\*\*

1. User presses 🗨 icon → “সমস্যা বলুন” (Describe your problem).
2. Voice message sent → AI routes to agronomist → Response via Jami chat.

---

#### ### \*\*4. Technical Requirements for Developers\*\*

- **Jami Web SDK**: Integrate using [Jami's JavaScript library](https://jami.net/js-sdk/).

- **Prebuilt UI Components**:

```
```javascript
```

```
// Voice call button
```

```
<button onclick="jami.startVoiceCall('doctor_roster')">🗨 ডাক্তার</button>
```

```
// Anonymous chat
```

```
<button onclick="jami.openChat('labor_rights_ephemeral')">🗨 নিরাপদে রিপোর্ট
```

```
করুন</button>
```

```
```
```

- **Localization**: Bengali voice prompts (e.g., `audio/ben/help.mp3`).

---

#### ### \*\*5. Phase 1 Deliverables\*\*

- **Basic Chat/voice UI**: Icons, buttons, and minimal text.
- **Jami API Integration**: Voice calls, text chat, and message queuing.
- **Testing**: Verify functionality on low-end Android devices (e.g., Xiaomi Redmi Go).

---

#### ### \*\*6. Why This Works for our Audience\*\*

- **Zero Typing**: Voice-first design bypasses literacy barriers.
- **Familiar Workflow**: Mirrors WhatsApp usage (voice messages, tapping icons).
- **Offline Resilience**: Queues messages during connectivity drops.
